Bober's  
hardy  
northern  
seeds  
at new  
low prices!

# Bober's hardy seeds have more yield ability

We are now recleaning the 1952 crop of alfalfa seed. The season was excellent for harvesting highest quality seed. Production has been good and prices are the lowest in several years. We can guarantee you that these prices will save you money.

Remember -- our seed is produced on the northern foothills of the Black Hills of South Dakota at high altitude and on dry land -- the most vigorous -- high producing -- disease resistant seed available. Order NOW and save.

The current U. S. Government Crop Report shows that this year's seed crop of Lincoln Bromegrass was only a 20% of normal. We have high quality -- weed free -- seed on hand now -- but please order soon. Supplies are really limited.

**If you have a storage problem we will be glad to store your order until spring when you are ready for it. Please designate on your order if you desire that it be held or shipped immediately.**

Prices quoted are per 100 lbs. for premium quality seed, free from all foul weeds, bags included for orders received before December 10, 1952.

## ALFALFA

### RHIZOMA

The newest hybrid. Plant only 1/4 of normal seeding rate. Registered 10 lbs. \$ 19.50 50 lbs. 93.50 Blue Tag. 100 lbs. 185.00

### RANGER

The wilt resistant hybrid lives twice as long as non-hardy alfalfa. 54.50

### COSSACK

Hardy, drought resistant and highest yielding alfalfa. 44.50

### RANGER COSSACK

50-50 mixture, for most wilt resistance and highest yield. 50.00

### LADAK

Wilt resistant for high altitude and dry climate. 49.50

### GRIMM

44.00

### DAKOTA

Number 12 \$43.50

### FARM BELT

Not quite as bright color as above No. 1 grade, a mixture of second choice seed from above varieties, 98% or better purity, free from foul weeds. 39.00

## GRASSES

### Lincoln Brome

Highest yielding strain domestic Bromegrass. \$36.50

### Canadian Brome

For northern states. 27.00

### Ree or Intermediate Wheatgrass

The new vigorous growing Ree is perennial sod forming grass which spreads by creeping root-stocks -- and stays green all summer. Plant 4 to 6 lbs. per acre. 65.00

### Tall Alta Fescue & Ryegrass

Mixture of 90% Alta Fescue, 10% of Ryegrass for immediate and permanent pasture. 34.50

### Tall Wheatgrass

The amazing new introduction from Turkey. A drought resistant grass that also produces under wet or alkaline conditions where other grasses can't grow. Stays green all summer. 57.00

# RHIZOMA ALFALFA

THE FIRST SIGNIFICANT DEVELOPMENT  
IN ALFALFA IN 20 YEARS.

!

*a multiple root system and  
a low set crown means...*

THE TAP ROOT SYSTEM FOR SUB SOIL MOISTURE

THE RHIZOMA SYSTEM FOR SURFACE MOISTURE AND NEW STEMS

**MORE GRAZING** The crown is below the ground surface - so the plant cannot be injured by overgrazing or trampling. Stands actually thicken with grazing. Competes with grass.

**MORE HAY** Rhizoma Alfalfa stands up to 42 in. high. In actual tests - out-yielded Grimm with leafier, finer alfalfa of higher protein.

**LESS SEED NEEDED** Plant only 1/4 the seed you normally plant in your area!

**GREATEST RESISTANCE TO WINTER KILLING** In tests north of the Canadian Peace Valley it survived:

- (1) 60° below zero temperatures
- (2) Flooding
- (3) Ice sheets

This is an actual photograph of the root system of a 4 year old Rhizoma Alfalfa Plant re-touched for color only. Courtesy of the Canadian Experiment Station of the University of British Columbia.
